Change Individual Student's Options for Problem Set

Go to Classlist Editor

For the student of interest click on assigned problem sets. This gives a list of all problems and notes the ones assigned to the student by a check in the box of the problem set.

From this page you can change the open, due and answer dates for a signal student for an assigned problem set. Note that you cannot set a date and time until the problem set is assigned. For the case where problems are assigned as they are accessed via Moodle, you will need to first assign the problem to the student manually in Webwork, then set the date and times.

If you wish to change other parameters, click on the Problem set (in 2nd column). Scrolling down, you can see that you can change: seed, status, weight, max attempts for a single problem.

You can actually change the problem, but I can't imagine doing that. But I'm sure somebody had a case at some time.
